

What Is Claimed Is:

1. An eyeglasses case comprising:  
an upper cover;  
a lower cover;  
5 a button which is secured to the upper cover; and  
a rotating member which is secured to a contact  
portion between the upper cover and the lower cover,  
wherein, when pushing the button for release, a spring in  
the rotating member moves to slowly open the upper cover  
10 upwardly.

2. An eyeglasses case according to claim 1,  
wherein said rotating member comprises a support spindle  
for supporting the spring and an outer housing for  
containing the support spindle, the support spindle and  
15 the outer housing being integrally united, and wherein  
oil is sealed in the support spindle.

3. An eyeglasses case according to claim 1,  
wherein the rotating member comprises a main body case  
having holes for securement, a rotor or a vane fitted  
20 into an inside of the case, oil with which a clearance  
inside of the case is filled, and a cover body.
